

Calculation Policy – St Mark's Church of England Junior School

This policy lays out the expectations for both mental and written calculations for the 4 number operations and has been created to support the teaching of a consistent approach to mathematics throughout St Mark's Junior School. This is underpinned by the use of models and images that support conceptual understanding and this policy promotes a range of representations to be used across Key Stage 2.

At St Mark's, we strive to equip children to demonstrate useful written methods that, firstly, enable them carry out a calculation successfully and secondly, can be used to explain their thinking to others. We see written methods as complementary to mental methods and should not be seen as separate from them. Our aim is that children use mental methods when appropriate, but for calculations that they cannot do in their heads, they use an efficient written method accurately and with confidence.

This policy identifies *progression* in calculation strategies rather than specifying which method should be taught in a particular year group. Children should not be expected to move onto the next stage if they are not ready or they are not confident. By the end of Year 6, children should be able to choose the most appropriate approach to solve a problem: making a choice between using jottings, an efficient written method or a mental method.

Concrete, pictorial, abstract (CPA) concepts are reflected within the policy as Equipment, Jottings and a Formal Written Method. This approach should not be confused as differentiation for lower, middle and higher attaining children. It is to be used with the whole class where teachers promote each area as equally valid. Manipulatives (equipment) in particular should not be presented as a resource to support the less confident or lower attaining pupils; rather as an aid for all children who find them useful at any stage in their learning.

We hope you find this document useful in understanding how we teach children to carry out calculations at St Mark's. We are mindful that children will be transitioning to us from Infant School; therefore our teachers are wholly committed to building on these foundations to ensure learning makes sense. If you have any questions about the information in the calculation policy or if there is anything you are unsure about, please get in touch with your child's class teacher as they will be happy to help.

Addition

Addition

<p>Expected</p> <ul style="list-style-type: none"> recall multiplication and division facts for multiplication tables up to 12×12 use place value, known and derived facts to multiply and divide mentally, including: multiplying by 0 and 1; dividing by 1; multiplying together 3 numbers recognise and use factor pairs and commutativity in mental calculations multiply two-digit and three-digit numbers by a one-digit number using formal written layout solve problems involving multiplying and adding, including using the distributive law to multiply two-digit numbers by 1 digit, integer scaling problems and harder correspondence problems such as n objects are connected to m objects 	<p>Expected</p> <ul style="list-style-type: none"> identify multiples and factors, including finding all factor pairs of a number, and common factors of 2 numbers multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers multiply and divide numbers mentally, drawing upon known facts multiply and divide whole numbers and those involving decimals by 10, 100 and 1,000 solve problems involving multiplication and division, including using their knowledge of factors and multiples, squares and cubes solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates 	<p>Expected</p> <ul style="list-style-type: none"> multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication identify common factors, common multiples and prime numbers perform mental calculations, including with mixed operations and large numbers use their knowledge of the order of operations to carry out calculations involving the 4 operations solve problems involving addition, subtraction, multiplication and division use estimation to check answers to calculations and determine, in the context of a problem, an appropriate degree of accuracy multiply one-digit numbers with up to two decimal places by whole numbers solve problems which require answers to be rounded to specified degrees of accuracy solve problems which require answers to be rounded to specified degrees of accuracy
<p>In-depth</p> <ul style="list-style-type: none"> continue to practise recalling and using multiplication tables and related division facts to aid fluency. practise mental methods and extend this to 3-digit numbers to derive facts, (for example $600 \div 3 = 200$ can be derived from $2 \times 3 = 6$). practise to become fluent in the formal written method of short multiplication with exact answers write statements about the equality of expressions (for example, use the distributive law $39 \times 7 = 30 \times 7 + 9 \times 7$ and associative law $(2 \times 3) \times 4 = 2 \times (3 \times 4)$). combine their knowledge of number facts and rules of arithmetic to solve mental and written calculations for example, $2 \times 6 \times 5 = 10 \times 6 = 60$. solve two-step problems in contexts, choosing the 	<p>In-depth</p> <ul style="list-style-type: none"> practise and extend their use of the formal written methods of short multiplication. apply all the multiplication tables and related division facts frequently, commit them to memory and use them confidently to make larger calculations. use and understand the terms factor, multiple and prime, square and cube numbers. interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders, as fractions, as decimals or by rounding (for example, $98 \div 4 = 98/4 = 24 \text{ r } 2 = 24\frac{1}{2} = 24.5 \approx 25$). use multiplication and division as inverses to support the introduction of ratio in year 6, for example, by multiplying and dividing by powers of 10 in scale drawings or by multiplying and dividing by powers of 	<p>In-depth</p> <ul style="list-style-type: none"> practise multiplication for larger numbers, using the formal written methods of short and long multiplication. undertake mental calculations with increasingly large numbers and more complex calculations. continue to use all the multiplication tables to calculate mathematical statements in order to maintain their fluency. explore the order of operations using brackets; for example, $2 + 1 \times 3 = 5$ and $(2 + 1) \times 3 = 9$. understand common factors can be related to finding equivalent fractions develop the connection made between multiplication and division with fractions, decimals, percentages and ratio

<p>appropriate operation, working with increasingly harder numbers. This should include correspondence questions such as the numbers of choices of a meal on a menu, or 3 cakes shared equally between 10 children</p>	<p>a 1,000 in converting between units such as kilometres and metres.</p> <ul style="list-style-type: none"> • introduce the language of algebra as a means of solving a variety of problems • distributivity can be expressed as $a(b + c) = ab + ac$. • understand the terms factor, multiple and prime, square and cube numbers and use them to construct equivalence statements (for example, $4 \times 35 = 2 \times 2 \times 35$; $3 \times 270 = 3 \times 3 \times 9 \times 10 = 9^2 \times 10$). • use and explain the equals sign to indicate equivalence, including in missing number problems (for example $13 + 24 = 12 + 25$; $33 = 5 \times ?$). 	<ul style="list-style-type: none"> • develop the language of algebra as a means of solving a variety of problems • multiply and divide numbers with up to two decimal places by one-digit and two-digit whole numbers. • multiply decimals by whole numbers, starting with the simplest cases, such as $0.4 \times 2 = 0.8$, and in practical contexts, such as measures and money.
--	---	---

Stage 3

Equipment

$$34 \times 5$$

Jottings

x = signs and missing numbers

Continue using a range of equations as in Stage 2 but with appropriate numbers.

$$24 \times 8 = 192$$

24 lots of 8 have been added in total.

$$13 \times 4:$$

10 3

$$10 \times 4 = 40$$

$$3 \times 4 = 12$$

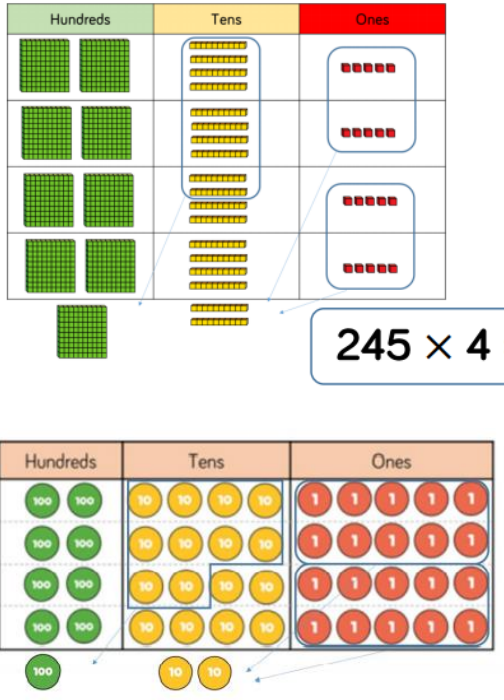

Bar model are used to explore missing numbers
